

Key Comfort H/S Bite Splint

\$79
SPECIAL

FEATURES:

The Key Comfort H/S™ Bite Splint is the most widely prescribed bite splint due to its comfort and fit. It is made of two layers: a 1 mm soft polyurethane inner layer and a 3 mm hard copolyester outer layer. The soft internal surface rests comfortably against the teeth and gums, while the hard occlusal surface provides durability and bonds with acrylic for easy modification. You can choose our standard feature with a flat occlusal plane and slight opposing cusp indentation or choose your specific bite plan needs. The bite splint is fabricated from ISO-certified ERKODENT® copolyester and polyurethane discs, which are BPA-free and non-allergenic, making it ideal for patients who are allergic to acrylics or metals.
